

PROGRAM

Environment: Windows 10

Tools/Language: Python

Objective: Program to Count the Occurrences of a Word in a Text File.

Code: -

```
def read_data():  
    f = open("test.txt", 'r')  
    count = 0  
    s = f.read()  
    x = s.split()  
    for i in x:  
        if i == "the":  
            count +=1  
    print(str(count)+" "+"times")  
  
read_data()
```

Output: -

```
= RESTART: C:/Users/krouse/OneDrive/Documents/Python Program File/no. of words.py  
5 times  
|
```
