

PROGRAM

Environment: Windows 10

Tools/Language: Python

Objective: Write a regular expression that extract the date from given string.

Code: -

```
import re
result=re.findall(r'\d{2}-\d{2}-\d{4}','Amit 34-3456 12-05-2007, XYZ 56-4532 11-11-2011, ABC 67-8945 12-01-2009, Next birthday on 16-08-2023')

print(result)
```

Output: -

Shell

```
['12-05-2007', '11-11-2011', '12-01-2009', '16-08-2023']
```

```
