

Experiment

Objective:

Write a program to create a database company and having tables manager and employee. Each table must have at least four fields.

For Manager:

Code:

```
import sqlite3
a = sqlite3.connect("Emp.db")
b = a.cursor()
b.execute("""drop table if exists employee""")
b.execute("""create table employee (id int, name char(20), salary int, address
char(50))""")
a.commit()
b.close()
```

Output:
