PROGRAM

Environment: Windows 10

Tools/Language: Python

Objective: Program to Read a String from the User and Append it into a File.

Code: -

```python
fname = input("Enter file name: ")
file3=open(fname,"a")
c=input("Enter string to append: \n");
file3.write("\n")
file3.write(c)
file3.close()
print("Contents of appended file:");
file4=open(fname,'r')
line1=file4.readline()
while(line1!=""):
 print(line1)
 line1=file4.readline()
file4.close()
```

Output: -

```
= RESTART: C:/Users/krous/OneDrive/Documents/Python Program File/no. of words.py
Enter file name: myfile.txt
Enter string to append:
This string is appended.
Contents of appended file:
This is

a file

created for

testing

This string is appended.
```
